DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Leung et al. (U.S. 6,466,964) in view of Swander (U.S. 2004/0049585)

Leung et al. teach the invention substantially as claimed including:

A system and method of implementing Internet protocol security in a mobile IP network, comprising: (col.1, line 6-col.2, line 47)

a cache configured to store security associations established with corresponding nodes; (728)

a communication control that initiates communication to a second node via the mobile IP network; (fig.1; mobile nodes)

a security association locator that searches the cache to see if any security association is established with the second node; (col.9, line 61-col.10, line 24)

a security association control that initiates establishment of a security association for protecting communications with the second node without waiting for a response communication from the second node; (col.9, line 61-col.10, line 24)

Art Unit: 2143

initiating communication by a first node to a second node via the mobile IP network; (fig.1; mobile nodes)

searching by the first node a cache thereof to see if any security association is established with the second node; and (col.6, line 41-col.9, line 34)

initiating by the first node establishment of a security association for protecting communications with the second node without waiting for a response communication from the second node. (col.6, line 41-col.9, line 34)

Leung et al. fail to teach wherein the security association (SA) employs a Kerberos key exchange.

Swander, however, discloses a system for initiating communication between a CN and a MN in which the CN initiates and proposes security associations (SA) to the MN, upon which, the SA is a Kerberos key (Swander - Page 3 paragraph 1002811. Both Leung et al. and Swander are concerned with securely transmitting data between a CN and an MN in a mobile IP network. The use of Kefberos keys were notoriously well known and widely for encrypting data sent between two nodes.

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to incorporate the use of a Kerberos key, as taught by Swander into the invention of Leung in order securely encrypt data between nodes using a very secure and widely known and used encrypting technique.

Response to Arguments

3. Applicant's arguments with respect to claims 1-34 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeffrey C. Pwu whose telephone number is 571-272-6798. If attempts to reach the examiner by telephone are unsuccessful, the examiner's
